

Installation Instructions for the 28-qt. Coleman Ice Chest Carriers

To install the carriers, lay out as illustrated in the photo with the two white "X" 's facing up. Place the ice chest over these "X" 's and pull the 1 1/2" webbing up around the chest as far as you can. Fasten the three buckles and snug them up as tight as possible. (These have been preset for you.)

Your ice chests should look like this in the carriers.

The vertical straps are used to adjust the height of the coolers on the saddle.

Adjust the vertical straps as necessary so the ice chests ride rather high on the sides of the llama. (The vertical straps have been adjusted at the proper length for Flaming Star saddles.) Riding higher on the sides will produce less sway and require less energy from your llama to carry them. Attach the belly strap to the web clamps and snug up just enough to keep the ice chests from bouncing should your llama jump a log or a creek.
