

Llama Hardware Stuff Sacks

Llama Hardware sacks are designed to fit in the Flaming Star Panniers next to a 4-gal square bucket or another stuff sack.

There are two modes of compression:

1. Roll the top down compressing the load as you go. Let the air escape from each end of the top. It helps to lean into the bag as you compress. Clip the side release buckle for a virtually waterproof package. The pack cloth is waterproof, but the seams are not sealed. Unless the sack is sitting in water, the contents should remain dry. To maintain its waterproof qualities, store away from the sun, machine wash in mild detergent when dirty, and line dry. Protect from sharp objects.
2. For extra compression, use the 3' strap to connect to the side release buckle and wrap under the bottom of the sack.
